

COMPANY OVERVIEW

Melton Machine & Control Company is a recognized leader in the field of automated arc welding. We are a premium-quality, value-focused equipment designer and builder and an innovative, experienced partner in developing custom solutions for factory automation.

We've learned that each client is unique, and understand each project is unique as well. We approach each assignment with keen enthusiasm, with the anticipation we'll be engineering and creating something new; and our extensive experience gives us confidence we can answer the complex manufacturing challenges our assignments invariably pose.

We're the right size for today's industrial manufacturing world: large enough to commit the resources necessary to accommodate the timetables and scale of delivery businesses demand, but small enough to provide the immediate and personalized focus our customers deserve.

PRODUCT LINES

Melton Machine & Control Company, founded in 1970 by Vernon L. Melton, has become well known and highly regarded industry wide for our automated welding systems. We offer Rotary Welding Machines with Horizontal, Inclined and Vertical spindles with up to eleven independent axes of cam-controlled torch motion.

We also have over twenty-five years of experience designing and building robotic systems integrating ABB, FANUC, Motoman and Panasonic robots.

Our ability to offer a full range of products from our family of Rotary Welding Machines and Custom Robotic Systems puts us in a unique position to identify and offer the best solutions to our customers. In some applications the best option is flexible hard automation; in others it is robotics. However, in some instances the best solution is a hybrid of the two, e.g. cam-controlled torches working synchronously with robots.

Also, we offer in-depth experience with Linear Machines, Manual Fixtures, Leak Testing and Material Handling Equipment.

We recognize that startup assistance, technical support and replacement parts are critical to our customers' success and our commitment to providing these services sets us apart.

PRODUCTION PROCESS

We believe in and practice continuous improvement. We are constantly streamlining our internal processes, with ongoing 5S and Lean initiatives. We have incorporated Lean into our machine and fixture designs, and strategically outsource component manufacturing to ensure that every service we offer and deliver represents value to our clients.

PRODUCTION FACILITY/EMPLOYEE EXPERIENCE

At Melton Machine & Control Company, we have the facility and the people to partner efficiently and effectively with our clients. As importantly, we are fully prepared for growth as dictated by client demand.

Our current facility was newly constructed in 1999, and comprises 154,000 total square feet, with over eighty-five percent of that space devoted to manufacturing. This includes 44,000 square feet of manufacturing space added to the original building in 2007.

We have forty years of experience in designing and building automated systems, with a workforce of eighty. And over half of our employees have from ten to thirty-plus years of service with us. Our clients are guaranteed valuable experience, continuity and individualized attention on every project.

OUR PHILOSOPHY AND PROMISE

Since 1984, Melton Machine & Control Company has been one hundred percent employee owned. This has led to our philosophy which, simply put, is: We believe our success is a direct result of dedicated, experienced employees, representing a unique combination of talents, with sensitivity to client service and a commitment to client success.

And our proven performance over the years has led to our promise, which is: We promise our clients experienced, responsive and flexible performance, underscored by impeccable confidentiality and integrity. Thus we promise a broad array of safe, reliable, high-value products and services, delivered on schedule and within budget.
